DETAILED ACTION

The Office Action is in response to the Applicant's communication filed on April 28, 2010. In virtue of this communication, claims 1-9 and 17-20 are currently presented in the instant application, wherein claims 1 and 2 are amended and claim 20 is new; and claims 10-16 are non-elected as a result of the restriction requirement (see CTRS: Requirement for Restriction/Election filed on 03/31/2010 and Response to Election/Restriction filed on 04/28/2010).

Request for Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/24/2009 has been entered. An action on RCE follows.

Election/Restrictions

2. Applicant's election of group I of process invention in the reply filed on 04/28/2010 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election **without traverse** (MPEP § 818.03(a)).

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

4. Authorization for this examiner's amendment was given in a telephone interview with Sheridan Neimark on 07-14-2010.

The application **in the amended claim filed on 12/24/2009** has been amended as follows

1.) Claims 10-16 are cancelled.

2.) In claim 20, lines 11-12, delete "at and open to the interface between the upper substrate and lower substrate and insert --in each of side lower ends of a bonding region of the upper substrate--.

3.) In claim 3, line 1, after "claim", "2" has been replaced to --5--.

4.) In claim 4, line 1, after "claim", "2" has been replaced to --5--.

5.) In claim 5, line 1, after "claim", "2" has been replaced to --5--.

6.) In claim 6, line 1, after "claim", "2" has been replaced to --5--.

7.) In claim 8, line 2, after "claim", "7" has been replaced to --2--.

8.) In claim 17, line 2, after "claim", "2" has been replaced to --5--.

9.) In claim 18, line 2, after "claim", "17" has been replaced to --10--.

10.) In claim 19, line 2, after "claim", "2" has been replaced to --5--.

Allowance

5. Claims 1-9 and 17-20 are allowed.
6. The following is an examiner's statement of reasons for allowance:

The prior arts of the record do not teach, or suggest, either singularly or in combination, at least the limitations in claims 1 and 2 of (a) forming recesses in each of side lower ends of a bonding region of the upper substrate, wherein the bonding region is a circumference region of the sample filling space; and (b) overlapping the upper substrate and the lower substrate each other, and then introducing the organic solvent into the recesses to bond the upper and lower substrates, wherein the recesses are open channels and the organic solvent is introduced into the recesses by capillary phenomenon, wherein the bonding region is bonded by the organic solvent introduced into the recesses; and limitations in claim 20 of adapted to provide a fine channel within the solid plastic surrounding the sample filling space, the fine channel being provided in each of side lower ends of a bonding region of the upper substrate; further adapted to provide solvent delivery holes whereby solvent can be delivered to the fine channel; introducing organic solvent into the fine channel to join the upper substrate with the lower substrate, with the organic solvent passing through the fine channel and effecting bonding by movement of the organic solvent by capillary action.

Uguyen et al. (US. Pat. No. 6,329,224) teaches a method of forming a recess and fine channel in each of side lower ends of a bonding region of the upper substrate, and Fujiyama (US. Pat. No. 6,559,940) teaches a method of bonding an upper substrate and a lower substrate in order to manufacture a plastic micro chip comprising

Art Unit: 2815

the upper substrate, the lower substrate and a sample filling space having a predetermined height for filling a sample between the upper and lower substrates. However, Uguyen and Fujiyama do not teach at least the specific process of forming recesses or fine channel in each of side lower ends of a bonding region of the upper substrate, wherein the bonding region is a circumference region of the sample filling space and introducing the organic solvent into the recesses to bond the upper and lower substrates by capillary phenomenon.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
